FELISHA WHITE

Applied Data Scientist | Machine Learning Engineer | Business Analyst | Data Visualization Specialist | Equity-Centered Analytics
Atlanta, G.A. | (404) 695-717 | felisha.white@outlook.com | linkedin.com/in/fshepwhite | github.com/FelishaWhite(CyberFee)

PROFESSIONAL SUMMARY
Applied data scientist and graduate of the *Applied Data Science and Analytics* masters program at Howard University experienced in evaluating high-stakes decision systems in complex institutions. Trained in statistical analysis, machine learning, and data visualization, with a strong focus on transparency, accountability, and equity. Proven ability to translate technical findings into policy-relevant insights for non-technical audiences. Seeking to apply applied data science skills to algorithmic accountability, civil rights research, public-interest litigation or other social impact spaces.

CORE SKILLS
Statistical analysis & predictive modeling (R / Python), program & system evaluation, data visualization & narrative reporting, research design (quantitative & mixed methods), stakeholder collaboration & project management

TECHNICAL SKILLS
- *Programming:* Python, R, SQL
- *Machine Learning & Analytics:* Linear and logistic models, ensemble methods (random forests, gradient boosting), neural networks, clustering, dimensionality reduction, NLP, time series forecasting
- *Data Processing:* pandas, NumPy, scikit-learn, TensorFlow, XGBoost
- *Data Visualization:* Tableau, Power BI, Fusion, Matplotlib, Seaborn, ggplot2
- *Geospatial Analysis :* ArcGIS, Story Maps, spatial analysis & mapping
- *Domain Expertise:* Higher education, grant and non-profit evaluation, health equity, housing & displacement, social policy

PROFESSIONAL EXPERIENCE

Director, Business Intelligence Analysis | Spelman College | Atlanta, GA March 2026 to present
- Built an executive dashboard suite for Senior Leadership and department leads reducing ad hoc data requests by 30% and improving turnaround time for strategic decisions from weeks to days.
- Developed predictive models to evaluate program impacts and measure effectiveness of student success interventions.
- Design and manage evaluation and reporting frameworks to ensure transparent, consistent, and evidence-based program review and strategic alignment.
- Serve as a strategic partner to senior leadership, supervising analytics staff and collaborating across academic affairs, institutional research, and governance bodies to advance data-informed, accountable decision systems.

SELECTED PROJECTS

Policy Support: Machine Learning Analysis of Neighborhood Gentrification and Displacement
- Designed a multi-phase, policy-oriented analysis of gentrification and displacement in the Atlanta metropolitan area
- Compared multiple ML models for neighborhood risk classification; Modeled displacement magnitude using linear and Ridge regression; Used K-means clustering to validate neighborhood typologies and support policy-relevant conclusions

Tools & Methods: Python (pandas, scikit-learn), U.S. Census API; Logistic Regression, Linear & Ridge Regression, K-means clustering; model evaluation, error analysis, and policy-oriented interpretation

Health Equity: AI-Based Diagnostic Support Framework for Diabetes Risk
Applied Machine Learning Group Project – Manuscript in development
- Co-developed an AI-based **pre-screening decision support tool** using **NHANES** data (~3,700 records) to flag elevated diabetes risk
- Emphasized interpretability, bias awareness, and ethical limitations of deploying ML in high-stakes health contexts

Tools & Methods: Tools & Methods: Python, NHANES data; MLP Neural Networks, Logistic Regression, SVM (linear/RBF), Decision Trees, KNN; MICE imputation, feature transformation, model comparison

Policy-Oriented: Health Disparities and Racial Inequities in Disease Mortality
- Genomics Group Research Project; *Title: Integrating CDC Mortality Data Analysis, AI-Powered Pattern Discovery, and Machine Learning Clustering for Health Disparities Research*
- Identified major data precision gaps affecting marginalized populations highlighting sociostructural drivers of health inequities for policy and advocacy use

Tools & Methods: Python, CDC WONDER data, CI analysis, BGMM, agglomerative clustering, AI-assisted literature synthesis (OpenAI API)
